

**REMARKS**

The Advisory Action takes the position that a co-extrusion can be considered to be emitted from a single opening. Claim 20 has been amended to state that the compositional variation occurs along the length of a single layer of material. Claim 29 has been amended to remove a redundancy created by the amendment of claim 20.

The amended language of claim 20 more clearly distinguishes from compositional variation that occurs between different layers. The cited art clearly does not the invention as claimed.

Withdrawal of the outstanding rejections and allowance of the application is respectfully requested.

Respectfully submitted,

VIDAS, ARRETT & STEINKRAUS
